

Installing the Cloud Library Chromebook app

March, 2016

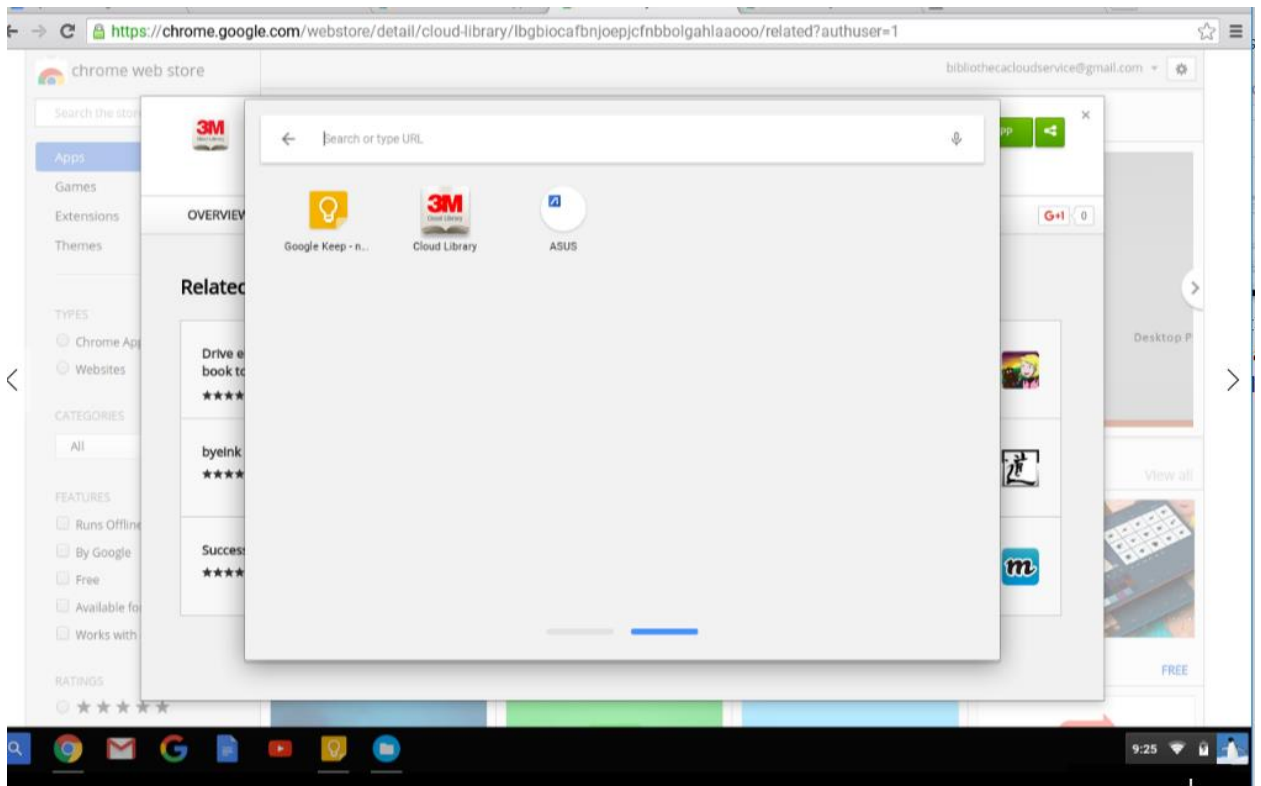

1. From your Chromebook go to the Chrome Web Store at chrome.google.com and search for Cloud Library. Click to open and click then click the blue **ADD TO CHROME** button.

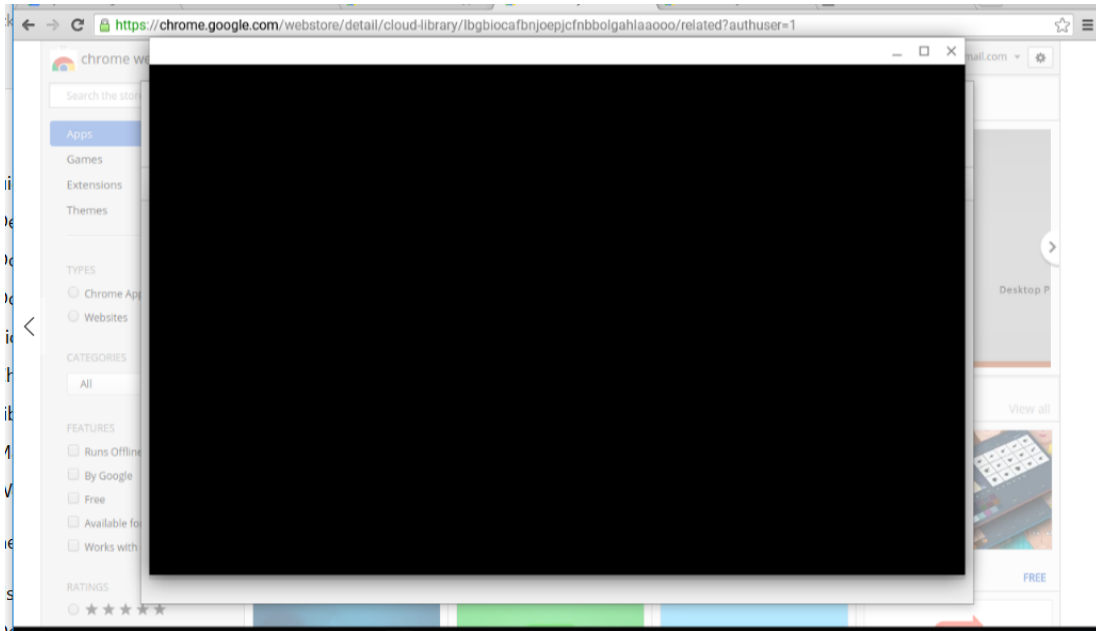

2. Please be aware that if you have never downloaded an app that uses the Chrome runtime environment, the download may take up to 5 minutes. You will see the grayed out app icon and the progress popup window in the bottom right corner while the app downloads.

3. When the download is complete the icon will no longer be grayed out. You can access the app by clicking on the icon.

- When the app opens, you may encounter a black screen like the one shown below. Maximizing the screen will give you the library log on screen.

- The Library log on screen should appear. Follow the prompts to connect to your library and begin using the Cloud Library Chromebook app.
